

Testing Framework: What are the required parts of your design expression?

The first and consistent variable in every test you make for your design is: **does this design make sense to the participant?** Start there, before you drill down into testing the specific parts that make up your design.

Name of your design:

Directions: Use this framework to plan your tests. You can test multiple parts of your design in a single sitting, but **make sure the parts of your design are grouped by some logic**, like time sequence or type.

Part(s) of design being tested:

1. Do the participants understand the design? Do they know where to begin? Do they know where their task(s) end? Is the path through the design clear?

2. Name of part:

3. Name of part:

1.

Explanation of test:
How will you introduce the test to the participant?:

Testing script or questions:

2.
